

## 1969 Jaguar E Type Coupe 4.2

### The Job

We bought this car from another hire company in 2009 in a shocking state. Although it had a MOT it had significant rot, a failed head gasket and was generally shabby.

### The Challenge

We attended to the mechanical problems first with a top end engine rebuild, rear end rebuild and new ancillaries. The bodywork was restored and the car repainted next. We then refurbished the interior. The car would still benefit from detail interior improvement, which we will attend to during 2015.

### The Result

After an inauspicious start, we have achieved a remarkable turnaround with this car. It is our highest mileage hire car, covering 15,000 miles every season and regularly is out for several weeks at a time with different hirers. Its reliability and the durability of its restoration is testament to the quality of the work we have done.
