

## 1980 Jaguar XJ6 4.2

### The Job

This early XJ6 Series 3 had been subject to a poor older restoration & had localised rot over the body. When it was damaged in an accident we decided to complete a full body restoration.

### The Challenge

The car had been laid up for a while so required work to make it reliable – including a carburettor & fuel system overhaul. The bodywork was outsourced to a repair shop and the car given a full respray.

### The Result

The Jaguar is now a reliable fixture on our fleet and looks the part too. Although a relatively straightforward project, sourcing & supplying the repair parts took some research and hunting down using our contacts.
